The **PREDATOR Racing exhaust system** for the **Ducati Diavel V4**, designed by the **Centro Stile Zard** and **handcrafted in Italy from AISI 304 stainless steel**, features an **exclusive design** with **four outlets**, a **claw-style heat shield**, **laser-etched Zard logo**, and **handcrafted aesthetic heat tinting from welding**. Completed with protective **carbon fiber side covers** and the unmistakable **Zard racing sound**.

Available in three configurations:

- **Slip-on Kit Full Racing**

Stainless steel silencer, carbon fiber heat shield, stainless steel central header, and carbon fiber side covers.

- **Slip-on Kit Racing**

Stainless steel silencer, carbon fiber heat shield, stainless steel pre-silencer box, and carbon fiber side covers.

- **Slip-on Racing**

Stainless steel silencer, carbon fiber heat shield, and carbon fiber side covers.

The **Slip-on Racing** configuration is compatible with the **Zard Mako** exhaust system.

Predator exhaust systems for the **Ducati Diavel V4** **do not require ECU remapping**, are **easy to install**, and **ready to ride**.

KIT FITTING INSTRUCTIONS:

The manufacturer, importer, or retailer disclaims any liability for any incidental damages, including personal injuries or other damages arising from improper installation or use of the Zard Srl exhaust system.

During the installation of the Zard Srl exhaust system, it is essential to ensure that the system itself does not come into contact with other parts sensitive to high temperatures. Zard Srl does not provide any warranty regarding damages arising from improper installation, use, and maintenance of the Zard exhaust system.

The warranty is strictly limited to defects recognized by our technical department and caused by normal use of the exhaust, excluding elements subject to normal wear such as gaskets and sound-absorbing material. The warranty is void in case of accidents, modifications, improper use, competition use, or application of the Zard exhaust system on a vehicle for which it has not been specifically designed or tested by Zard Srl.

During the operation of the exhaust system, in case of overheating, it is important to avoid contact with hot parts to prevent burns, both when the engine is running and when it is turned off. It is also recommended to protect others, especially children, from such injury risks. Some Zard exhaust system kits may contain chemicals such as ceramic anti-seize grease and bolt sealant; handle them with care, avoiding inhalation or ingestion and contact with skin, eyes, or mucous membranes, and keep them out of reach of children.

Before proceeding with the removal of the original exhaust system, it is advisable to compare the received parts with the materials list and consult the instruction video available on the website to ensure that you have all the necessary components for the installation of the new Zard exhaust system. It is important to note that the video instructions and images are indicative and may not exactly represent the installation process.

The method of uninstalling the original exhaust system may vary depending on the existing system; therefore, it is recommended to carefully follow the instructions provided by the original manufacturer of the exhaust system for removal.

Before starting the installation, it is essential to allow the exhaust system and the engine to cool down adequately. It is suggested to entrust the installation to a qualified technician, as improper installation could compromise the durability of the exhaust system and/or damage the vehicle.
